

Internet Accounting

Professional Web Based Enterprise Resource Planning

Enterprise resource planning systems (ERP) streamline and automate many of the business practices associated with the operations or production aspects of an organization. Historically they have been seen as large, complex, expensive systems, but now there is a solution for everyone.

WebERP is a complete system specially developed to satisfy small and medium-sized company requirements for accounting and reporting. All departments that are involved are integrated in one system, which contains everything to ensure full control and provide an overview to allow the right decisions to be made:

- Order Entry
- Multi-Currency Accounts Receivable
- Multi-Location Inventory
- Accounts Payable
- Purchasing
- Bank Account Maintenance and Reconciliation
- General Ledger

The system is simple to set up and can easily be adapted to a wide range of business practices. It has modules suitable for: manufacturing; logistics; distribution; inventory management; shipping; invoicing; as well as a host of facilities for service sector organizations, such as consultancies.

Internet Based Solution

What is different to many accounting systems is that **WebERP** designed from the ground up to make use entirely of Internet technologies. It requires only a minimal network connection, a web browser and Acrobat reader. The client software is thus already familiar to most users.

This combination of existing applications, Open Source software and a hosted environment allows for massive scalability, reliability and cost

Key Priorities

- **Reliability:** An accounting system, more than any other system, needs to be reliable. Continuous on-line availability of the current status **WebERP** every area of the business is a critical advantage in today's fast moving business environment. **WebERP** has been refined over years of work by accountants and developers.
- **Accessibility** to Employees and Customers from Anywhere: Almost all organizations have a web presence. In order to properly integrate all systems and be able to have maximum choices for employee and customer access it only makes sense to use a platform suited to the Internet. **WebERP** provides the widest accessibility possible, whilst deploying the same security tools used by Internet banking.
- **Flexibility:** for Companies, Employees and Customers: An ERP system must be useful to everyone involved. It must be flexible in its platform and configuration. **WebERP** has been designed with ultimate flexibility in mind.
